

MY COIN CATALOG

A simple app for keeping pictures and notes about every coin in your collection. It works on your phone and on your computer, and it keeps your pictures to yourself.

The app's address on the internet is:

coinmax-coder.github.io/coin-catalog

Three things to know

Your coin pictures stay **on your own phone or computer**. They are never sent anywhere.

There is **no account and no password**. The app never asks for money or personal details.

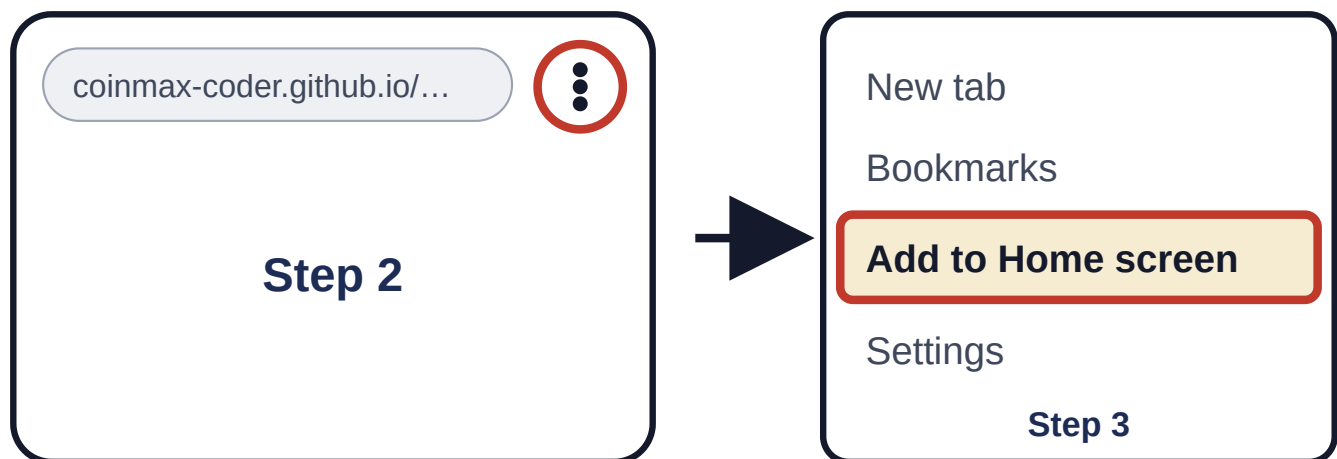

Save a **backup** once a month so you never lose your collection (see page 8).

PUTTING THE APP ON YOUR PHONE

You only do this once. Afterwards a gold coin button called **My Coins** opens the app, even without internet.

On an Android phone

- 1 Open **Chrome** and type the address **coinmax-coder.github.io/coin-catalog** in the bar at the top.
- 2 Tap the  button (three dots) in the top right corner.
- 3 Tap **Add to Home screen** or **Install app**, then tap **Install**.

PUTTING THE APP ON YOUR COMPUTER

On a Windows computer

- 1 Open **Chrome** or **Edge** and type the same address at the top.
- 2 Click the small **install** picture at the right end of the address bar (a screen with an arrow), or click  and choose **Install**.
- 3 The app now opens from the **Start menu** like any other program.

coinmax-coder.github.io/coin-catalog

ADDING YOUR COINS

One coin at a time

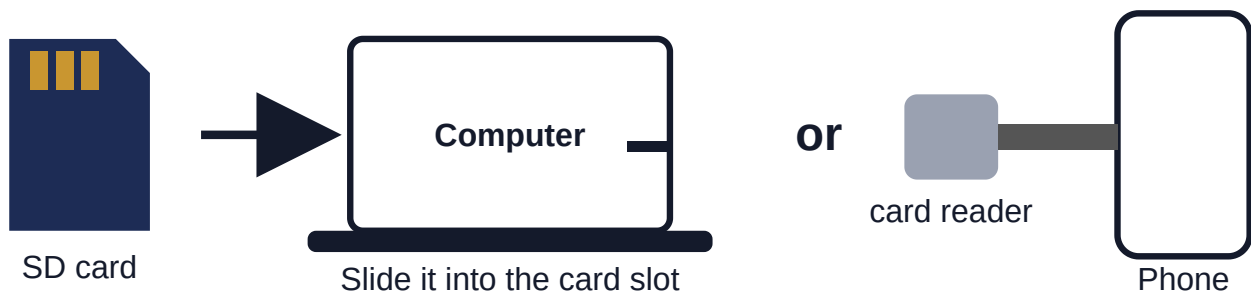

- 1 Tap the big gold **+ Add a coin** button.
- 2 Under **Front**, tap **Take photo** to use the phone's camera, or **Choose file** to pick a microscope picture. Do the same for the **Back**.
- 3 Fill in what you know: year, country, coin, mint mark, condition, price paid and notes. Anything can be left empty.
- 4 Tap **Save this coin**.

The screenshot shows a mobile app interface for adding a coin. At the top, there is a dark blue header with a white back arrow and the text 'ADD A COIN'. Below the header, a light gray box contains the instruction 'Add the front and the back. Photos are optional.' Below this, there are two columns for 'Front' and 'Back'. Each column has a large circular placeholder for a photo, followed by 'Take photo' and 'Choose file' buttons. Below the photo sections, there are three text input fields: 'Year' (with '1964' entered), 'Country' (with 'United States' entered), and 'Coin' (with 'Kennedy half dollar' selected from a dropdown menu). The 'Coin' dropdown is highlighted with a blue border.

ADDING PICTURES FROM THE SD CARD

Many microscope pictures at once

Your microscope saves its pictures on a small **SD card**. Each picture you bring in becomes its own coin, and you can fill in the details later.

- 1 Put the SD card into the computer, or into a small card reader plugged into the phone.
- 2 Tap **Add photos from SD card**.
- 3 Open the SD card, select the pictures you want, and tap **Open** or **Select**.

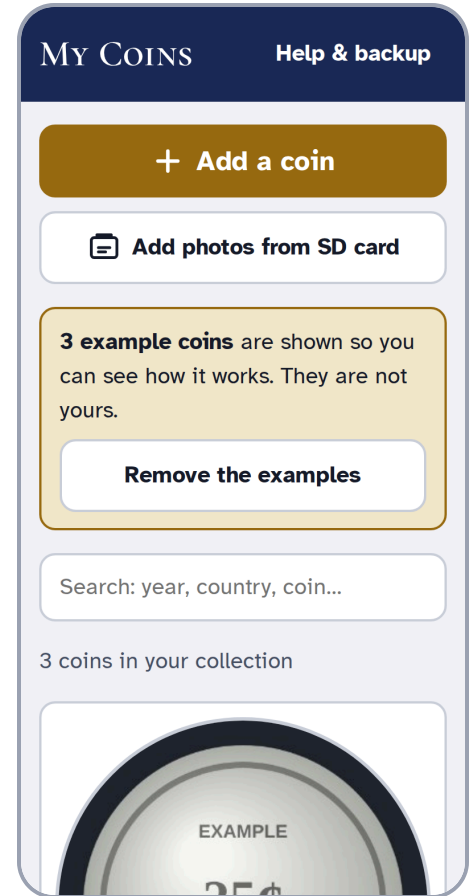

On a phone: if you only see recent photos, tap  or **Browse** and choose the SD card from the list.

LOOKING AT YOUR COINS

The first screen shows all your coins as large round pictures, newest first.

- ✓ **Search:** type a year, a country or a word from your notes in the search box, and only matching coins are shown.
- ✓ **Open a coin:** tap its picture to see everything about it.
- ✓ **Go back:** tap **◀ Back** at the top left.

When you first open the app you will see **3 example coins**. They are pretend. Tap **Remove the examples** when you are ready.

ZOOMING IN AND MAKING CHANGES

Zooming in

On a coin's page, tap **Zoom in on this photo**. Then use the big **+ Bigger** and **- Smaller** buttons, or spread two fingers apart on the picture. Slide one finger to move around. Tap **Close** when done.

Changing or deleting a coin

Tap **Change details** to fix anything.

Delete this coin always asks you first, so nothing is removed by accident.

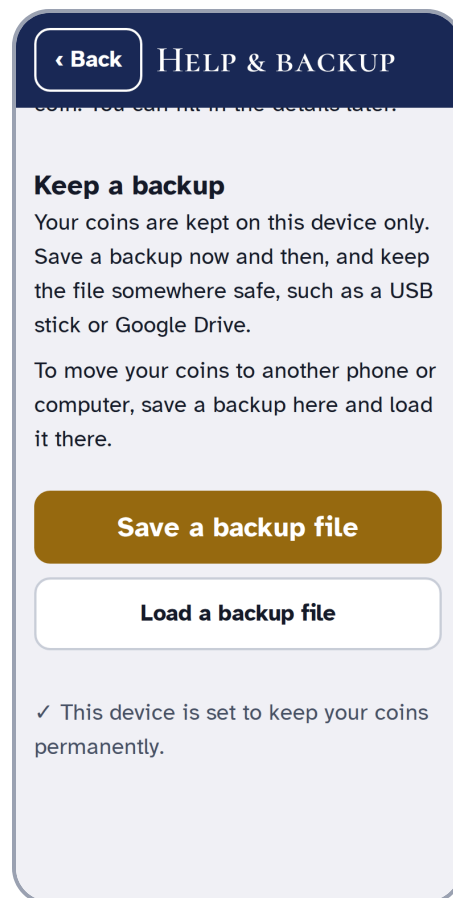

SAVING A BACKUP

Your coins are kept inside the app on that one phone or computer. A backup is a single file holding **all your coins and pictures**. If the phone is lost or broken, the backup brings everything back.

To save a backup (once a month is good)

- 1 Tap **Help & backup** at the top of the first screen.
- 2 Tap **Save a backup file**. It is named like **coin-backup-2026-10-06.json**.
- 3 Copy that file to a **USB stick** and put it somewhere safe.

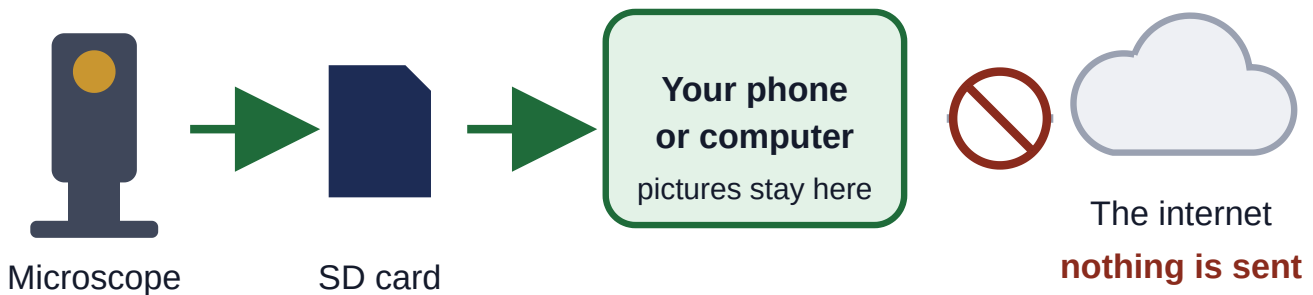

To bring coins back, or move them to another device

- 1 On the other phone or computer, open the app and tap **Help & backup**.
- 2 Tap **Load a backup file** and pick your backup file.

The phone and the computer each keep **their own** list of coins. They do not update each other by themselves. A backup file is how you carry your coins from one to the other.

IS IT SAFE? WHERE DO MY PICTURES GO?

Why it is safe

- ✓ **Your pictures stay with you.** When you add a picture, the app copies it into its own storage on that phone or computer. It has no way to upload it, and nobody else can see it.
- ✓ **The internet only delivers the app.** The website sends the app to your device, the same way a shop hands you an empty photo album. What you put in the album stays at home.
- ✓ **No account, no password, no sign-up.** It never asks for your name, email, address, bank details or money.
- ✓ **No ads and no tracking.** The app contacts no one except its own website, to check for updates.
- ✓ **Your SD card is not changed.** The app makes a copy, so your original pictures stay safe on the card.

THE FEW RISKS, AND WHAT TO DO

- ! **Losing the phone, or clearing it.** If the phone is lost or broken, or Chrome's saved data is wiped, the coins on it are gone. *What to do:* save a backup once a month and keep the SD card pictures.
- ! **The backup file holds everything.** Anyone who has the file can see your coins, pictures and what you paid. *What to do:* keep it on your own USB stick, and do not email it to anyone you do not know.
- ! **Someone using your phone.** Anyone who picks up your unlocked phone can open the app. *What to do:* keep a screen lock (PIN or fingerprint) on the phone.
- ! **Fake calls or messages.** Nobody from this app will ever call, text or email you. *What to do:* if someone says they are from "the coin app" and asks for money, passwords or to control your computer, hang up. It is a scam.
- ! **Copypcat websites.** *What to do:* only use the address on the front of this guide, **coinmax-coder.github.io/coin-catalog**.

The app is free and made by your family. It is not a shop and it does not sell anything.

QUICK HELP

I can't find the app

Look for the gold coin called **My Coins** on the phone's home screen, or in the computer's Start menu.

I only see recent photos, not the SD card

Tap  or **Browse** in the picture chooser and pick the SD card.

I added a coin by mistake

Open it and tap **Delete this coin**, then **Delete**.

My coins are not on the computer

The phone and computer keep separate lists. Save a backup on one and load it on the other (page 8).

The writing is too small

On a computer, hold **Ctrl** and press **+**. On a phone, make the text bigger in the phone's Settings under Display.

Is my collection protected?

Open **Help & backup**. A line with a ✓ means the device will keep your coins permanently.

Who to call for help
